

Executive KPI Dashboard – Task 26

HI MONIKA – DATA ANALYTICS TRACK | Level 2 • Day 26

Objective

Create a concise, one-page management dashboard in Power BI with dynamic filters. The dashboard focuses on sales, profitability and order performance while avoiding visual clutter.

Tools

Power BI, DAX and a Superstore-style sales dataset.

Dataset

The included dataset contains 1,500 order records across 2024–2025, with dimensions for region, state, segment, category, sub-category and shipping, plus Sales, Quantity, Discount and Profit measures.

KPI Definitions

KPI	Definition
Total Sales	Sum of Sales in the active filter context.
Total Profit	Sum of Profit in the active filter context.
Profit Margin	Total Profit divided by Total Sales.
Total Orders	Distinct count of Order_ID.
Average Order Value	Total Sales divided by Total Orders.

Dashboard Design

Top row: KPI cards. Middle row: monthly sales trend and regional sales. Bottom row: category performance, top sub-categories and management slicers. The design is intended to fit on one screen and support quick executive review.

Executive KPI Dashboard

Product Catalog | New | Dynamic Filters: Year | Region | Category | Segment

Total Sales

₹0.16M

Total Profit

₹0.01M

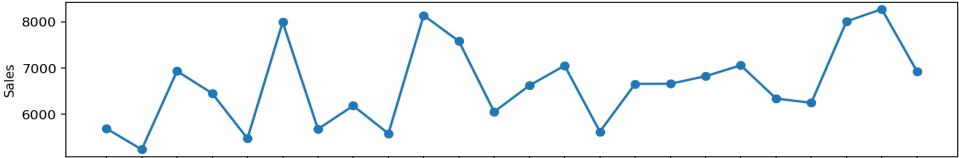

Profit Margin

8.2%

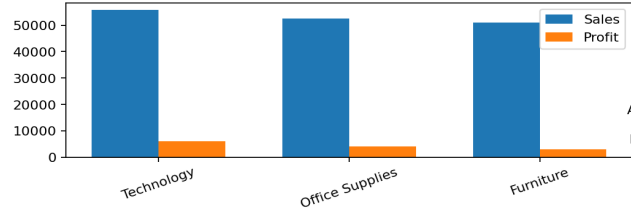

Total Orders

1,500

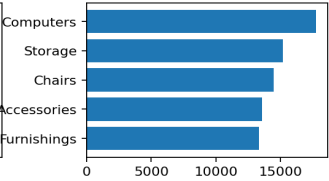

Monthly Sales Trend

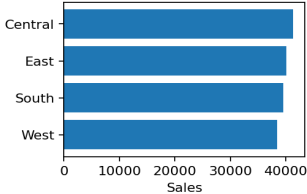

Sales & Profit by Category

Top 5 Sub-Categories

Sales by Region

Management Filters

- ☐ Year
- ☐ Region
- ☐ Category
- ☐ Segment

Dynamic Filters

Recommended slicers are Year, Region, Category and Segment. These slicers should cross-filter the KPI cards and charts so management can move from an overall view to a focused business segment.

Power BI Implementation

1. Import Superstore_Executive_KPI_Data.csv using Get Data → Text/CSV.
2. Set Order_Date and Ship_Date to Date data types.
3. Create a Date table and relate Date[Date] to Superstore[Order_Date].
4. Create the supplied DAX measures.
5. Build KPI cards, line chart, category chart, region chart and top-5 sub-category chart.
6. Add Year, Region, Category and Segment slicers.
7. Apply consistent number formatting and keep the page uncluttered.
8. Test cross-filtering and save the completed report as a .pbix file.

Management Questions Addressed

- What belongs on an executive dashboard? — A small set of decision-relevant KPIs, trends, comparisons and filters.
- How do you avoid clutter? — Limit KPI count, remove redundant visuals, use whitespace, keep labels concise and prioritize the most actionable comparisons.

Deliverables

Power BI-ready dataset, KPI definitions, DAX measures, dashboard layout guide, dashboard preview and this PDF report are included in the ZIP package.
